Topic: 6 Message: 6

Hi there Kenwood owners. Al, K1LTJ and I seem to have found an issue with recent TS-2000's and TM-D700A's/TH-D7A(G)'s.

If you have a TS-2000 and a D700 or D7, please verify that they will work together in Sky Command mode. For those of you who are about to say "Sky Command is illegal according to the FCC!" the only part of Sky Command that is at issue is turning on RX audio and having the TS-2000 TX the HF audio to you. You can test that your rigs work together without doing that. Simply try to change bands, modes, etc.

If it works, please send your serial numbers (both the TS-2000 and the unit you use to command it) and let us know. If it doesn't work, please send your serial numbers (again, both serial numbers) and let us know. We're trying to track this down to a specific serial number range since it is apparent that SOME folks have working Sky Command systems.

Thanks for your time and effort helping us get detailed information to Kenwood.

Subject: Re: [KenwoodTS-2000] Re: Help with sky command (please!)

Kenwood Amateur Radio Support: I am CCing you on this matter since it appears Al, K1LTJ and I have both stumbled upon the same issue and contacted Kenwood Amateur Radio Support as well as TS-2000 peer groups

with regards to the same problem, on the same day.

We need to isolate and squash this bug if it is indeed the case.

My symptoms are exactly the same as those of K1LTJ with his two
TH-D7A(G)'s and a TS-B2000 only I have these symptoms on my
TH-D7A(G) *and* on my TM-D700A attempting to command my TS-2000.

1. The TS-2000 and TH-D7A(G)/TM-D700A TNCS talk to each other.
2. When I command a freq change, the TNCS interact, and the display
is returned to whatever the VFO was set to. (e.g. 14.000)
3. If I transmit on the HT, the TS-2000 will transmit on 20 meters.
(or whatever band I set initially).
4. No other sky command function from the HT works.

Serial numbers involved (for me) are:

TS-2000: 30100022
TM-D700A: 30100178
TH-D7A(G): 30300077

Your help resolving this issue will be greatly appreciated by K1LTJ,
myself and I'm sure many others who have purchased recent Kenwood
amateur radio products.

From: Jim Thompson - w3lap
Topic: 7 Message: 7

Hey Gang
Good morning...
I want to buy One or Two UT-50's to go in an Icom-820H. The UT-50 is a tone squelch board. Need one for the UHF and one for the VHF. I am in desperate need for at least one UT-50 for the VHF. I will purchase two, used or new.

If you have these boards or know of someone that has them, please e-mail me off the list. By the way i plan to use this IC-820 as a remote base on my 6-meter machine, 53.010 tx - 52.010 rx - 77-hz tone.

Thanks in advance,

12. Programming Cable

Yahoo group: kenwoodthd7agclub
Date: 2002-11-21 00:30:49 UTC
From: WX2NJ
Topic: 12 Message: 12

I've seen some outrageous prices for a programming cable for the D7A, everything from $39.95 to $59.95.
You can save yourself some money by using an old serial mouse "tail" with a DB9 connector and a 2.5 mm, 3 connector plug from Radio Shack.
Just refer to page 53 of the instruction manual for wiring. Just remember that RXD at the plug is TXD at the PC and visa versa.
Then all you need is the free program off the Kenwood website or under the "files" section of this group.

Check out http://www.pfranc.com/projects/g45contr/g45_idx.htm
<http://www.pfranc.com/projects/g45contr/g45_idx.htm> for the Garmin end.

I have an Etrex that came with a 9 pin serial cable for connection to a PC.
I had subsequently purchased a combo cable on Ebay that connected a PC and
power from a cigarette lighter in the same cable. Since the original cable
was no longer needed, it was cut and spliced onto a coiled cable with 2.5mm
end from Radio Shack (cell phone accessory). It works very well and cost
around four dollars to make.

15. Poor Battery Life and No sub mute ?

Yahoo group: kenwoodthd7agclub
Date: 2003-04-12 03:16:58 UTC
From: mickeyri
Topic: 15 Message: 15

Greetings all,
I have had a ThD7a for a few weeks now.. I have noticed that it has poor battery life, and when the battery does in fact die, the radio just keeps power cylcing. You cannot shut it off, unless you plug it in. Plus you get no low battery indicator. Is this normal ?
Also, I have found that the D7a has no sub mute. Except for a balance key to adjust the volume between both bands. When you are trasmitting on one band and you are also receiving on the other band. The poeple you are talking to can also hear what your listening to. Again is this normal? All of my other brands of HTs have had a sub mute.

Thanks in advance.

Hi Bob,
I have bought the cable and software combination. Yes it is a
ridiculous price for a cable and some freeware software. You can make
a cable for the D7a but you will need to first find a 3 pos sub mini
phono jack. By that I mean a tip ring and sleeve leads. Similar to
the GPS cable that comes with the D7a. Once you find that you can
follow the wiring diagram in the manual and make the cable with the
sub mini on one end a DB9 on the other. Dont forget to add a couple
of iron ferrite noise suppressors on each end. I had a hell of a time
even with the original Kenwood cable at first. The rado would not
download. It wasnt until I redownloaded the Memory control program
again, that it worked..

TM-D700 & TH-D7A(G)

I have the listed rigs in excellent condition. The H/T comes with the PB-38 & PB-39 batteries. Both radios will be shipped in original boxes with original manuals. Looking to trade both for a Drake R8B in as new condition, or HF rig (i.e. FT-897, Icom 7060MKIIG, IC-746...no QRP please) general coverage transceiver. Also have an Alpha-Delta VRC active speaker (in as new condition)that I can throw into the trade if necessary.

Additionally, will sell both for $825 + shipping

Please e-mail off list if interested & thank you.

Anyone have some hints on using the Kenwood programming software?
It looks like the only thing that can be programmed from the
software is the receive frequency. No tones, etc.

22. Modulation????

Yahoo group: kenwoodthd7agclub
Date: 2003-08-12 21:37:00 UTC
From: czorn25
Topic: 22 Message: 22

Hello all,

I have a wierd question. Well should be weird. I have the D7 and I use it every day. It was on the shelf for a while (4-6 months) and when I started to use it every day since then I get people saying it sounds over modulated. No matter where I put the mic they still say this. I do have a Kenwood speaker-mic. I disconnect it and again they still say its over mod. This is only in the 70cm side too. I'm not really into going into the back of the rig and fixing it since I have no clue on what I am doing. But yet I don't want to pay $200 to have a tech from a local Kenwood repair center to go in there and tweak a couple resistors. Can anyone point me in the right direction????
Thanks

Chris Zorn KD7QYI

Topic: 26 Message: 27

Randy,

I don't have a E-750 but I have connected the D7A to many PC's and WinCE devices. You will need the serial cable for your PPC and a null modem adapter (or rewire the PPC serial cable to swap RX and TX data, if possible). Attach this to the D7A serial computer cable provided with the D7A and wired as shown in the manual.

Run your desired software and set the comms for COM1 (normally but could be different), 9600 baud, 8 data bits, 1 stop bit and NO parity.

Thats all there is to it. You should be up and running at this point. Good Luck.

Bob,

The FTBasic program is supposed to be able to take a TPR CSV file and convert it to a format that can be uploaded by the 'free' Kenwood programming software. However I haven't been able to get it to work. I can read the Kenwood .D7 files into the FTBasic programm but I can't seem to go the other way.

If you find something that works let everyone know. I know it would be a real boon to all D7A users to be able to do that.

29. Interesting observation using THD7A

Yahoo group: kenwoodthd7agclub
Date: 2004-01-06 21:14:58 UTC
From: Gene
Topic: 29 Message: 29

On a recent trip using my THD7A to monitor APRS activity and feeding the GPS input from a Garmin eMAP handheld GPS (NMEA 4800 baud), I noticed that whenever an APRS station was received on the THD7A, a corresponding waypoint symbol (small black square) was entered for the APRS station position on the eMAP display along with a label containing the last 6 characters of the callsign (truncates the leading characters if longer than 6 - i.e. WA1AAA-5 showed up as 1AAA-5; W1AW-1 would show complete call).

I didn't realize that the THD7A sent NMEA strings back to the GPS but undoubtably it does. Nice little feature to have as a simple APRS positioning display. When the data from the eMAP was downloaded to my laptop running Garmin Mapsource maps, the APRS waypoints all appeared where they were reported at.

Note for this to occur it does require a 3 wire hookup for TX and RX GPS data as shown in the THD7A manual.

Hi Randy, I've used my D7AG connected to a Palm Vx using PocketAPRS. Works great. I'm amazed that I can have a text message conversation through PocketAPRS via the D7AG as nicely as it does. I only wish I had street level maps for PocketAPRS. I used a highway map.

(I have a Magellan clip-on GPS from my Palm Vx, and that has street-level maps, so I wonder if someone will come out with the same for PocketAPRS [if PocketAPRS can use street level maps]).

Oh, I'm also using a Garmin Etrex Legend connected to the D7AG when connected to the Palm Vx with PocketAPRS. I've also used the same setup, but without a Palm Vx, connecting to a laptop instead and running UIView (and WinAPRS sometimes).

31. Kenwood Speaker Mic

Yahoo group: kenwoodthd7agclub
Date: 2004-02-12 18:12:26 UTC
From: Jack Fermón Schwaycer
Topic: 31 Message: 31

Hi,

I want to buy a TH-D7 buy I have always had Yaesu HT's, so I have a lot speaker mics, hands free, lapel mics, etc... So I want to know if there is a way to adapt them to the Kenwood HT...

I know the difference is the plugs size (2.5 and 3.5 mm) and the separation between them. So I think I can cut the plugs and solder the other ones, or but some adapters from 3.5 to 2.5 mm, and 2.5 to 3.5 mm. But I don't know if it will work... Is there another internal difference?? Have I to buy a new kenwood speaker mic ??

Thank you in advance, 73!

33. TH-D7A(G) with WinPack?

Yahoo group: kenwoodthd7agclub
Date: 2004-02-18 03:44:02 UTC
From: Ken Livingston
Topic: 33 Message: 33

Hi there.

Has anyone tried using the TH-D7A(G) with WinPack, using the radio in TNC Packet mode? I can get it to work by using AGWPE Pro (which supports using the D7A as a TNC) but I cannot get WinPack to talk to the D7A directly. I know that my settings have to be right since I can see all the incoming packets just fine on the WinPack terminal screen, but WinPack will not transmit.

I am using a PC control cable for the hookup (the cable that plugs into the PC port on the radio and the serial port on the computer). Any ideas or things I could check?

Also, whenever UI-View initializes the TH-D7A for APRS, the D7A defaults to frequency 144.800. I have set 144.390 simplex as my Calling Frequency for 2m so I can just tap the call button to get back to it, but it is a little annoying. Is this something that the radio is doing through programming or is it UI-View somehow?

THanks. :)
KK4KEN

PS - I'm new here too. :-D

Topic: 9 Message: 34

OK. I know this is an old message, but it seems to me that the D7A
won't do cross-band splits. A workaround would be that you could
store the uplink in one memory channel and the downlink in the next
memory up and then just transmit on the uplink. You will hear
anything coming down from the downlink since it *is* a dual-band,
dual-receive radio. :)

UI-View is doing it based on settings in the TH-D7.CMD
file. To alleviate this change

;Set the frequency to 144.800.
FQ 00144800000,0!FQ 00144800000,0

to

;Set the frequency to 144.390.
FQ 00144390000,0!FQ 00144390000,0

The 'G' version has the APRS software updated to v2. There are few cleanup points to the rest of the radio but I believe the external function (keypad, knobs, etc) are the same. Link to the Kenwood website and download the users manuals and read these. I have the original TH-D7A currently but am planning on sending it in for the upgrade ($60 from Kenwood).

From: Gene
Topic: 43 Message: 44

You would enable the GPS option underthe APRS menu on the D7A and set the output of the GPS unit to NMEA-0183 format.

Once everything is connected and setup (and assuming the GPS is locked on the satellites), pressing the POS key on the D7A front panel should display the position showing the lat/long and the degree/minute symbols (o & ') should be flashing at a 1 Hz rate indicating GPS data is being recv'd by the D7A.

Thats how the manual describes it and that is how mine work with an eMAP unit.

Under the NMEA menu on my Meridian I have 4 options...
1) Off
2) v1.5 APA
3) v1.5 XTE
4) v2.1 GSA

Does anybody know which of those last 3 would be the 0183 format?

Thank you

No sure but I would start with #4 and work backwards up the list. The actual name for NMEA is NMEA-0183 v2 so what the heck, give it a whirl. Worse thing is it might work.

I don't have a Meridian GPS so I can't give youmore info.

Good Luck

Have you enable the TNC to non-packet mode. Press the TNC button on the front of the radio one time and the display should get TNC without PACKET next to it. It should communicate then if all else is working. Also make sure you have the correct memory program for the D7A or D7A(G). They are different.

Topic: 43 Message: 51

On the Magellan website, referring to the Meridian product spec sheet, it says that the Meridian supports NMEA-0183 v1.5 and v2.1 so I am pretty sure that the version numbers in the list you provided correspond to the version of NMEA you want to connect to. Experiment using #4 first like I mentioned earlier.

I am assuming the 3 letters following the vers number are the sentence type output by the GPS in that mode. Usually NMEA sentences used are either type GGA or GSA in my experience. If you want more details refer to the NMEA-0183 specification.

Thank you, I have the Meridian Green GPS (not made anymore).

I've tried all of the options, along with 1200, 4800 (default), and 9600bps setting in the GPS but I don't seem to get an update into the radio, my position always reads as all 0000s. I've tried both NMEA settings in the radio also.

I've tried 2 different cables, both of which work when plugged into the PC port and hooked to my laptop to use the memory control program, it reads and writes to the radio perfect.

Any other ideas? I know that people have used this GPS with this radio in the past, I'm not sure what my probelm is though.

Thanks for all the help,
Josh

53. BT-11 Battery Case

Yahoo group: kenwoodthd7agclub

From: rogerc13676
Topic: 53 Message: 53

Just purchased the TH-D7A(g)...and I see on page (4) of the manual that you can expect to get 14 hours of use in High power using the alkaline battery back. That makes no sense to me...Anybody have any experience using the battery case? Thanks....

54. battery

Topic: 54 Message: 54

when the battery does in fact die, the radio
just keeps power cylcing. You cannot shut it off, unless you plug it
in. Plus you get no low battery indicator. Is this normal ?

Unfortunately, yes. The battery voltage drops to the point where the radio turns off. Turning off the radio eliminates the current draw, and as a result, the battery voltage comes back up. Since the voltage is now high enough for the radio, it turns back on, and the current draw causes the voltage to drop. Rinse, lather, repeat.

I find the best thing to do at that point is to take the battery pack off.

I have got 0 replys from my e-mails and am wondering if they are getting out????

now on to my question:

I got my D7AG wednesday (sans 1/10" cable, HRO sent one to me). I already had a female DB9 connector on my MAgellan Sportrak Map GPS and wired the cable (coldnt use the Kenwood (darn thin copper wires) found another cable I could use and I had an extra 1/10" plug)) up like in the book. Should the TX and RX be switched on the d7ag cable????????

Question: Are you plugging the GPS into the GPS port. The GPS port (2.5mm stereo plug) should use a different cable than the PC port (1/8" stereo miniplug). Your above comment leads me to think that you are in the wrong port for GPS???

Some suggestions:

1) I keep a spare 12Vdc power cable in the car just in case of this situation.

2) In my ARES/RACES packup, I keep a BT-11 alkaline case and set of fresh alkalines in case my NiCD/NiMH packs go flat.

You are right about Kenwood fixing this. You would have thought for the TH-D7A(G) model or $60 upgrade, they would have included a voltage display/check option and a latch so when it shut off due to low battery, it stayed off until you turned it back on.

Sorry. I stand corrected. Both ports are 2.5mm. I was thinking of the
MIC/SPKR ports which are different sizes. Anyway make sure the GPS is
in the GPS port. Makes a world of difference, hihi.

I had the same problem (HT not seeing my GPS) until I Set the GPS to 2.1, and 4800, and also Intitalized it with the HT on. On the HT side I set it at 1200BPS. and NEMA on the HT.

Anyone answer MY question about getting waypoints from the HT to the GPS (Magellan Sportrak) yet??????

Thanks
Scott (KA8S)

Sorry about the delay, I was gone on Search & Rescue training. I got it working, I determined that the PC cable and GPS cable appear to be opposite, one can't be used for the other (unlike what the guys at Ham Radio Outlet said).

I'm not sure what your Sport Trak question was, but the Meridians recieve waypoints fine ONLY if I set the waypoint option in the D7AG to 6 Digit Mgln, none of the other NMEA options work for putting the waypoints in.

63. NMEA Information Website

Yahoo group: kenwoodthd7agclub
Date: 2004-03-25 16:40:17 UTC
From: Gene
Topic: 63 Message: 63

For those of you who are curious about what actually is inside that mysterious NMEA data output from your GPS that seems to confuse most people, take a look at this website. It may seem like a lot of scientific mumbo-jumbo at first but after you have read it, read it again. There is alot of information there that may help you understand what is happening between the GPS and the Radio, and ultimately help you get everything going 100%.

Besides you might actually learn something, which makes it a good day.

Cut & paste this link -> http://www.gpsinformation.org/dale/nmea.htm

65. sound problems

Yahoo group: kenwoodthd7agclub
Date: 2004-03-26 19:33:41 UTC
From: Lela
Topic: 65 Message: 65

Hello all... :)

I just came across this group and am hoping to learn more about my THD7a(g). I also have a problem with my unit that I'm hoping some of you radio gurus can help with.

I've read through the archives and haven't seen any similar posts to reference. The problem I'm having with my radio is that there is no sound coming from it. It just dies in the middle of a transmission. I've sent it in for repair and it came back working fine. But now the sound no longer works again. It doesn't appear to be software related (I've reset the radio several times to no avail). Since receiving the radio back from Kenwood I have:

1. plugged in the BC-17 charger to recharge the battery
2. plugged in cables to connect it to my gps unit and laptop

All features appear to operate correctly - with the exception of the internal speaker. I can connect a headset or external speaker to the radio and can hear sound from them. The internal speaker sound died on the radio after about 20 minutes or so running APRS. Things were working well, and then suddenly they weren't.

I hate to send the radio back again for the same repair, especially if I have in some way caused this problem. If this is the case, it will just happen again. I did make the gps and laptop cables myself and they appear to be working correctly. Could my cables (or the BC-17) be introducing some sort of signal/power fluctuation inside the radio that shuts down the speaker? Could there be a crack in some internal component that causes this? A bad switch? Unfortunately, I know relatively little about electronics (although I can disassemble and reassemble a pc thanks to my old compaq computer).

Any help you can give would be greatly appreciated. As I said, I hate to send the radio back again unless it turns out to be a radio defect rather than user error. Thanks.

66. D7A batteries

Yahoo group: kenwoodthd7agclub

From: Chris Hare
Topic: 66 Message: 66

So, the battery pack with my unit is a NiCd. I got an alkaline battery holder as well. The alkaline holder says "do not use NiCd." Why not? Why should it matter if the batteries in the holder are NiCD, NiMH or what, so long as they have the right polarity and provide voltage/current within the defined limits?

Chris

70. Homebrewed PG-4W Cable Anyone?

Yahoo group: kenwoodthd7agclub
Date: 2004-04-21 14:32:31 UTC
From: Beischel
Topic: 70 Message: 70

Has anyone made their own PG-4W cable to program the D7A? The prices the manufacturers want for the cables are too high. I have checked around the web and cannot find a thing. I am hoping someone here has the answer.

Thanks,

Duffy

The following list show the pin connection that I currently have working with my Kendwood D7A. I listed both the connectors for the computer and for the GPS.

Kenwood D7a to Computer
Sub Mini DB9 (Female)
Tip -------- Pin 2
Ring -------- Pin 3
Sleeve ------- Pin 5

Kenwood D7A to GPS

Sub Mini DB9 (Male)
Tip -------- Pin 3
Ring -------- Pin 2
Sleeve ------- Pin 5

These have worked for me and I hope they work the same for you.

Good Luck!
Mike

Unless I missed something in the manual, I say NO. You can do FULL Duplex where you can Xmit on one band and recv simeotaneously on the other but there isn't capabilities to crossband repeat.

Also it will not digipeat which is really sad as it would be great if it did.

Just got my new TH-D7A today. I also made a homebrew cable for the GPS, but if you look closely, the pin out for GPS versus the serial PC connection just reverse pins 2 and 3. If you use a null modem cable and a gender changer you can use the same cable. Obviously not at the same time, but if you are only needing to use one cable at a time, no need to make another cable.

I have two GPS units currently. The eTrex Legend and the new
Foretrex 201. Both units work with the TH-D7A. One note about the
Foretrex201: It uses a newer NMEA version than the eTrex Legend.
This comes into play if you are using something like a HamHud or
Byonics TinyTrac. I have yet to get the Foretrex to work with
either the HamHud or the TinyTrac II or III.

From: panflute007
Topic: 84 Message: 84

Just got my D7 today. The first thing I noticed is the battery is big & bulky, compared to the L-ION batteries of the F6 for instance. Funny, the picture of the HT in the manual shows a smaller (thinner) battery. Mine came with the PB-39 stock battery. MAHA has it's PB-39 replacement, a NI-MH battery that LOOKS smaller....does anyone have one of these? Also, someone from HRO told me you cannot use the Kenwood charger to charge the MAHA battery, & the MAHA 777_2 charger is $80.....

Anyone have experience with these any info appreciated.
Thanks,
abe betesh

PS:
Here is what I have found so far:
MAHA has 2 batteries:
MH-PB-39, 1050 mah, 9.6 volts
MH-PB-39H, 1800 mah, 6 volts
both batteries are $60.
Both batteries appear to be the same size according to their
pictures, and both are smaller than the Kenwood PB-39 battery which
is 9.6 volts 600 mah.....
I really hate the size of this battery, especially since i own an F6
which is tiny by comparison---

You can check W & W Manufacturing and Batteries America! They both manufacture battery packs for your D7. The D7 is a larger radio and draws more power than the F6, but does much more than the F6! I would go with the Kenwood charger. The two 777 chargers that I have do not "TOP" the battery packs like the factory charger will. W & W Manufacturing and Batteries America also build good quality chargers!

Bill:
Thanks for the info. As it turns out I bought the W&W 6v battery &
charger, mostly because of its smaller size & larger capacity of
about 900mah....The MAHA batteries as it turns out are .85" thick -
at least as thick as the 9v kenwood battery, although they each also
have more capacity. I have not checked out the Batteries America
ones yet--we'll see what the W&W do when they arrive on Monday-

88. Ts-2000 comments ☐ sky command with d7a, f6a comparison

Yahoo group: kenwoodthd7agclub
Date: 2004-06-05 12:11:07 UTC
From: panflute007
Topic: 88 Message: 88

I fired up my ts-2000 and d7a's sky command II last night for the first time. Really cool. It works great. I need to work on the commands more but it is cool for sure. While both manuals provide detailed instructions, some key elements are omitted. For instance, after setting up the ts-2000 and setting menu 62e, you MUST push the MENU button again to exit out of the MENU system in order for sky command to work ☐ the manual does not tell you. Also, the freqs you set up on both radios must be SIMPLEX frequencies it will not work. You do not need to set up tones on the individual vhf/uhf freqs ☐ just set the tone in the menu. The manual does not tell you these things. When you push the 0 key on the d7a to connect, if anything is not set up right, the d7a will simply beep and the screen will remain on the connect screen. If you are nearby the radio, set your d7a transmit powers to EL, and your ts-2000 uhf power out to 5 watts before going into sky command mode .it will keep both radios cooler and extend the d7a batteries.
I will learn more tricks as I play with the system and post them up here.

Bill mentioned that the f6a HT does more in a previous email. In fact, the 2 HT's, both of which I own, are different animals, and each is great, but very different. The f6a is more up to date, lots of memories, very wide receive (shortwave, am broadcast with a built in bar antenna), up to 1 gig receive, a li-ion battery very sturdy construction, very small size, high output power, full output on 220mhz, etc etc. Great little radio. The d7a is older technology ☐ bulky NI-CD battery (I bought the batteries America replacement and charger), 200 memories, limited wideband receive, delicate construction, very scratchable screen, etc .BUT is does what no other HT does with its built in TNC and sky command system. Both radios have nice audio, the d7a has a slightly better sound due to its size.
So which is better is a matter of taste or necessity ☐ it would be nice if kenwood updated the d7a, but I wouldn't expect that to happen anytime soon ☐ afterall they are selling like hotcakes and they are not cheap. By time you get what you want and need (battery & accessories) it is $500. Resale value is high the moment. New price is current about $335 with the $25 discount ☐ I see them going for $350 and up on Ebay used ☐ go figure. I have been picking up the aprs packets here in ft Lauderdale ..interesting stuff. I was up in west palm beach yesterday and heard nothing on that frequency, so I guess the useability of that feature depends on how much activity is in your area. Packet it seems is all but dead, at least around here.

When you set up sky command the uhf and vhf freqs on the ts-2000, both sides must be in vfo mode, not memory mode. Not sure if that is the case for the d7a. Also, I initially tried to use 144.100 as a simplex freq, but sky command did not like it. I bumped it up to 144.170 and it was ok-

The HT must be in the first TNC mode (non-packete mode) in order for communinations to occur to PC.

Good Luck,

I do not have the TNC on at all. I just plug it in and turn it on, and MCP-D7G.exe works correctly.

Topic: 94 Message: 94

hello everyone. thanks for the few messages in the previous postings...however i am still unable to load freq's into the ht via kenwood's sftwr as well as get winaprs to work. i have tried different com ports, different baud rates, 3 different cables and 3 different pc's. i am beginning to wonder if there is a ht problem? i called kenwood, they emailed me a few things to try,those items i have done already, to no avial. i have had the non-g version 2 yrs ago and never had any issues about loading sftwr freq's or run aprs with winaprs like i am having such problems now. i have no other items to eliminate, so looking for any other ideas's or suggestions from people who are having luck with mcp-sftwr and winaprs. perhaps there is a ht setting that i have missed, or a certain way to power up the ht,pc,etc. any help would be great and very much appreicated. thanks again,,,mike..,..wd8bmp

Mike, what operating system are you using to try to do this? If you are running in Windows XP, then you might want to check to make sure your com port settings are correct for the software. I don't remember right now what the settings should be, but the software should have them listed somewhere. Also, you can check to make sure that your BIOS doesn't have the com port disabled. I realize you say that you had the non-g version working, but was it working on this same computer? If so, have you upgraded the operating system or any hardware components since that time?

Another thing to check is the version of the Kenwood software you are using. I vaguely (getting more gray hair by the day) that there are 2 versions of the software - one for the older THD7A's and another for the THD7A(G)'s. I might be wrong (confusing this with some other software I've used) but I think this was the case. I checked on the Kenwood website and they are only listing software for the (G) model.

I will have to check on the home PC to verify the software versions I am using on my older D7A (non-G version).

Good Luck,

Yes, It works fine with the Legend. Make sure you
have the legend interface set to NMEA In/NMEA Out and
wire up the d7ag cable correctly and you should be fine.

If you are using the serial cable that came with your kenwood, I do remember the kenwood cable had a red, white, and bare wire. In the kenwood owner's manual, there is a pinout diagram. I took some notes after making my cable but unfortunately I'm out of town until Monday evening and don't have any of my notes with me. What I do remember is the white wire is the transmit side of the kenwood and the red wire is the receive side of the kenwood and of course the bare wire is the ground. The white wire connects to the receive connection of the com port of your computer and the red wire connects to the transmit part of the com port of your computer and I remember the bare wire connects to pin 5 of the 9 pin serial connecter that plugs into the com port of the computer. I've compiled this by memory. I will know more when I get home tomorrow evening and have a chance to look at my notes.

I got it working, not sure what was wrong earlier.
One thing that threw me for a loop was the fact that the wires that are supplied with the d7a are coated.. I twisted the wires together to make sure that it worked before i soldered them and it didnt work.. Finally i figured out that i had to solder them to melt the coating so that they would conduct.

yea, the cable that comes with kenwood is made up of wires that are tiny and difficult to work with. I use the kenwood cable for packet and I made a second interface cable from telephone cable and a connector that I got from Radio Shack. It works great.

Magnus Ullberg <magnus@...> wrote:I got it working, not sure what was wrong earlier.
One thing that threw me for a loop was the fact that the wires that are supplied with the d7a are coated.. I twisted the wires together to make sure that it worked before i soldered them and it didnt work.. Finally i figured out that i had to solder them to melt the coating so that they would conduct.

If you are using the serial cable that came with your kenwood, I do remember the kenwood cable had a red, white, and bare wire. In the kenwood owner's manual, there is a pinout diagram. I took some notes after making my cable but unfortunately I'm out of town until Monday evening and don't have any of my notes with me. What I do remember is the white wire is the transmit side of the kenwood and the red wire is the receive side of the kenwood and of course the bare wire is the ground. The white wire connects to the receive connection of the com port of your computer and the red wire connects to the transmit part of the com port of your computer and I remember the bare wire connects to pin 5 of the 9 pin serial connecter that plugs into the com port of the computer. I've compiled this by memory. I will know more when I get home tomorrow evening and have a chance to look at my notes.

Magnus Ullberg <magnus@...> wrote:
they were both set to 4800
Gps: NMEA in/NMEA out @ 4800
d7a: NMEA

i guess i just wasnt making good connections when i pushed the wires into the db9.. i just wanted to make sure that it'd work before i went to all the trouble of soldering it.
btw, do you know which color goes to pin 3 and which goes to pin 4?

thanks,
magnus

Make sure the baud rate between the GPS and TH-D7 is set to 4800. That took me almost a week to figure out when I had problems getting mine to work.

Magnus Ullberg <magnus@...> wrote:ok, thanks.
I did that but all i got was a low pitch beep. (im assuming that's the no gps lock tone)

i have not made up a cable i was just pushing the wires into the db9 to make sure it'd work before i went to the trouble of soldering on an end.

Yes. Make sure the D7 is set to NEMA (not NEMA96 or "not used").

I just bought a new 'G' model and the cable that I bought (which appeared to be made to the same spec as what is described in the manual) didn't work. I checked the voltages and saw that TD and RD needed to be swapped - once I did that (swap pin 2 and 3 on the DB9), it worked great. Not sure if it's a misprint, or my radio, but it works now :)

"Never assume".

Ed,

I highly recommend that you get one with the coax instead of a regular adapter. A regular SMA to SO-239 adapter can put way too much strain on the SMA connector on the radio chassis.

I picked up a nice extender that has a male SMA and a SO-239 UHF female on about 18" of thin 50ohm coax. I can't recall exactly how much but it wasn't much. I like having the SO-239 instead of a PL-259 which requires a F-F UHF barrel adapter to hook up a antenna. I use this with my TH-D7A and a dual band MFJ magmount for APRS. Works great.

There are always several for sale (auction) on EBay in various configurations.

Good Luck,

Ordered my new D7A this morning from AES and should have it by
Monday or Tuesday. As to the antennas adapter, they carry a SMA to
BNC or UHF woth a 18" piece of caox between the connectors for
$15.00 so I added one of then to my order.

Hope to have it on the air by mid next week...

115. Batteries

Yahoo group: kenwoodthd7agclub
Date: 2004-07-30 20:21:04 UTC
From: Ed Tyler
Topic: 109 Message: 115

When I purchased my TH D7, I purchased an additional battery, the Maha 9.6 volt unit. Since they did not have the Kenwood rapid charger in I decided to wait on buying and additional battery charger. Good move.

The TH D7 eats batteries when you are using the APRS software and running the beacon. Start holding a few conversations and it will drain very fast. That should be expected. The problem comes when you are recharging the Batteries. All of the charging solutions offered by Kenwood require that the battery be attached to the HT while charging. You cannot have the radio on when the battery is charging. It takes ten to twelve hours to charge. Lets see, 4 hours of use and 10 to 12 hours of charging? Now about that second battery 2hours of use, two hours of use and then 20 to 24 hrs of charging. I have yet to get both batteries fully charged at the same time.

I have purchased the cigarette light power cord and it does allow you to avoid draining the batteries when in the car. I have discovered that the ³bescor² batteries that I use with my video camera are a fine portable power source for the unit.

I will buy a Maha charge for the unit.

Depending on your use, another solution is the BT-11. It takes 4 AA batteries. It says not to use NiCd batteries, but it works great with NiMH batteries. The power output is lower than the NiCd that came with it. If the batteries in the pack need a charge, I just put in another set. Some of the chargers work plugged in to a cigarette lighter.

I purchased the filtered power cable because my cars electrical system has some noise in it. One little note, the filtered power supply induces a 1.2 volt drop in the voltage delivered to the HT.

121. A few questions...

Yahoo group: kenwoodthd7agclub
Date: 2004-07-31 14:07:16 UTC
From: n1evh
Topic: 121 Message: 121

I recently purchased (maybe purchased is the wrong word... had the winning bid on) a Kenwood TH-D7A(G) on eBay. I have a couple of questions to ask while I'm waiting for the radio to arrive via FedEx.

Right now I own a Kenwood TH-F6. As I look in the manuals for the TH-F6 and the TH-D7A(G) (downloaded in .PDF format from Icom's website), I see the both radios use the same Clip Microphone with Earphone (EMC-3), the same Headset with VOX/PTT (HMC-3), and the same Speaker Mics (SMC-32, w/PF keys SMC-33, and with PF keys and VOL control SMC-34).

However... when it comes to programming it with a computer, the TH-F6 uses the PG-4P cable and the TH-D7A(G) uses the PG-4W cable. IF these two radios can use the same spkr/mics and headsets... why are the programming cables different???

My other question. I use UI-View for APRS. Now in the UI-View group here on Yahoo... I seen people talking about using their Garmin GPS's to view where people/things are on APRS. I believe they were using the Kenwood TM-D700A for this and using the data-out from that radio and then feeding it into the data-in on their GPS. Since the TH-D7A(G) is the HT version of that mobile radio... is it possible to feed data-out of the TH-D7A(G) and feed it into a Garmin GPS to do this???

Hopefully someone will be able to answer these questions for me. I posted them here out of the three TH-D7A groups I seen on Yahoo because this one had the most messages in it for June and July (another one had a lot more members in it... but not as active with messages and the other group you have to be approved by the moderator before you can post a message).

Thanks

Mike - N1EVH

123. Programming the radio from a computer...

Yahoo group: kenwoodthd7agclub
Date: 2004-08-09 03:07:31 UTC
From: Mike
Topic: 123 Message: 123

Hi everyone.

Well... I got my TH-D7A(G) in the mail the other day from FedEx. I was told in either this group or another group that the cable to program the HT with can be made (just a stereo 2.5mm plug and a female DB-9).

I made up the cable and downloaded the software from Kenwood's website. After selecting the proper comport... I try to read data from the radio to the computer and I keep getting a "Communications Timeout" error message. Now I know the cable was wired right but just incase it wasn't... I reversed pins 2 and 3 on the DB-9 and got the same results.

Does anyone have any insight as to why I'm getting this error message? Is there anything that has to be done to the radio in order to transfer data between it and a computer??? I know with the TH-F6A you had to set one of the menu options to PC... but I don't see anything about that in the manuals for the TH-D7A(G) (I'm guessing because it has a dedicated PC port).

I've tried this on both my desktop and laptop computer and both are running Windows XP Pro. "

Did you try to set the com port. Usually it will be com 1. If you are using a palm that is not usb, you must diable the hot sync. I hope this helps.

I got the TH0D7A(G) to talk to my computer... but not how it says in the manual.

On Page 53 of the manual... it says the 2.5mm Tip goes to DB-9 Pin 3 (TXD), the Sleeve goes to Pin 2 (RXD), and the Barrel goes to Pin 5 (GND). With my cable wired like this... I couldn't get it to talk at all with the radio (kept getting the "cummunications timeout error" with the programming software and I couldn't talk to the TNC with HyperTerminal).

Then as I was looking thru the messages in another TH-D7A(G) group, someone had written about how they were able to program their radio with the computer but now they couldn't. They said they checked their cable and it was OK. They said... "the Tip goes to Pin 2, the Sleeve goes to Pin 3, and the Barrel goes to Pin 5" (note that Pins 2 and 3 are reversed from what the manual says).

So I got my DB-9 Null Modem adaptor out and put it on the cable and then connected it to my serial port. When I did this... it worked. I was able to read and write data to the radio and I was able to talk to the TNC in the radio using HyperTerminal. In fact, when I read and write data to the radio... I don't have to do what was said to do in a little text file on Kenwoods website (turn the radio off, tell the program to read or write data, and then turn the radio on... it works just fine if I leave the radio on all the time)

Now here is where it gets strange. I took the Null Modem adaptor off and switched the wires on Pins 2 and 3 on the DB-9. When I did this... I couldn't talk to the radio. I received the "communication timeout error" message and I seen the TNC sign-on and give me a command prompt with HyperTerminal, but I couldn't talk to the TNC after.

So now it has me wondering why if I have the cable wired right, it won't talk to the radio. If I reverse Pins 2 and 3 and use a Null Modem adaptor, I can program the radio AND talk to the TNC with HyperTerminal. I mean, all a Null Modem adaptor does is reverse Pins 2 and 3 (and if it does anything else... its wasted with only 3 wires in the cable between the computer and HT).

From: walathan
Topic: 128 Message: 128

I'm trying to get the above combination to work. However, Kenwood gives no information whatsoever on how to use the TNC with a computer; it appears one can use the transceiver stand-alone, but perhaps not with a program. Has anyone gotten this combination to work? If so, could you please forward how you set the TNC options to get data to the computer for APRS+SA.

Many thanks,

TIA,

Bill, AK5K

Bill,

Two things to observe when using the TH-D7A or (G) versions.

If you are using an external APRS program like APRS+SA, you will need to put the TH-D7A into 'Packet' mode (press TNC twice on radio kybd and word "PACKET" will be shown on the TNC status box on the TH-D7A display). The APRS+SA software will format the 'packets' and output TX audio tones to radio. Select the proper TNC type in APRS+SA. Don't recall off the top of my head what that is but you shoudl be able to figure it out by trial and error at least.

If you plan to use the internal APRS software in the TH-D7A then you will only need a GPS if mobile or you can hand enter the coordinates into the TH-D7A position data fields. Also in this mode the word "PACKET" will not be shown on the TNC status box on the TH-D7A display. The radio's software will take the info and format the APRS packets instead of external software like APRS+SA.

Good Luck

Set your handshaking to S/W (Xon/Xoff) or OFF (no handshaking) t get
rid of the required hardware signals (DSR/DTR/RTS/CTS, etc).

I just checked the group website online. The last message according to it was Sept 7th.

I'm a member of 2 other Yahoo groups that have to do with the TH-D7A(G). The other two have a bit more activity than this one. Of the three Yahoo groupd... this one has the fewest members and the least message activity.

I think its time to drop one of the TH-D7A(G) groups... and guess which one it will be.

Nice radio Newbee,

The radio does have one quirk that you might want to
know about.
After a day of use, the radio will start to lock up
when the PPT button is pressed. The lock up is an
endless loop of power off, power on, etc.
The only way to break the loop seems to be to remove
the battery.
This behavior is just the ungraceful way the battery
has of saying that it needs to be recharged.

It's a design flaw. When the battery voltage drops too low, the radio resets. If the battery voltage is just a hair above the reset level, the radio receives fine, but when you transmit, the extra load pulls the voltage down and the radio resets. During the reset, the load drops off the battery and the voltage comes back up. The radio then turns back on. Lather, rinse, repeat.

When it happens, take the battery pack off and put on another one, and drop the first one in the charger.

Just picked up a new D7A at a swap yesterday, fired it up and itstarted to do the cycling thing with low battery. Glad to hear that's normal - I think? My Icoms give lots of warning on battery life and simply shut off when dead.

Little strange with this guy, but I know Kenwood's are good as well. Time will tell, and the features are pretty slick - very easy to setup radio, though I don't get $40 for the auto adapter??

Not very.

> is it easy to use;

You'll never figure it out just futzing with it, but after I read the manual once I've never had to refer back to it again. It's a pretty intuitive menu system once you get what they're doing.

> I am looking at is the Yaesu VX-7R

In my opinion there would be no reason to buy a D7 unless you were interested in APRS. I own half a dozen HT's and if all I'm going to do is talk on it, the D7 does the job no better and no worse than any of them. APRS is it's key distinguishing feature, and I've used it for portable packet operations as well. So it comes down to whether you need the built-in modem or not. If you do, there's no other game in town, if you don't, I think I'd be happier with the Yaesu since it's more durable.

If you need the built in tnc, get the Kenwood, if not, get the Yaesu. My Kenwood is great for APRS, but my Kenwood TH-D7 and my Kenwood TH-D7 radios both have more problems with intermod than any other radios that I have ever owned or operated. I know of 2 other people who have had to send their TH-D7s back to Kenwood for transmit problems shortly after purchasing them, one of them had to send theirs back in twice for the same problem. If you want a portable APRS tracker, or want to do portable packet, there is no substitute, the TH-D7 shines in that department.

> Thanks
> Bob
> N1WJO

If you are wiring it by the pictures in the manual, I believe the PC cable and the GPS cable are swapped. Barring that being the issue here, double and triple-check your connections and solder points. My friend Pete, KF4QOE, successfully made a cable for his D7A and he had to go back and resolder the RS232 end because of a bad solder ...

I had trouble soldering the cable supplied with the Th-D7A to the DB-9 connector. I soldered it up, and then tested continuity with my ohm meter. No good.

As it turned out, it seems that the even after you strip the insulation off of the wires in the Kenwood cable, what appears to be bare copper wire, is actually enamel coated..... Once I cleaned it off, and resoldered, it worked fine.

I agree. I just got my D7AG today. I soldered the data cable today to program the rig with the data file I previously setup. The wiring was exactly as the manual stated. I did clean the wires before soldering. Even after they were cleaned with some steel wool they were still a little hard to tin. It still took a little time on the iron to heat them up enough to flow the solder. Checking with the VOM the part of the bare wire that wasn't tinned, didn't make contact. Bottom line, you need to clean and tin the wires.

156. Scanning with APRS active?

Yahoo group: kenwoodthd7agclub
Date: 2005-02-16 07:48:54 UTC
From: Jon Rohde
Topic: 156 Message: 156

I just got the rig today. After playing around with the rig before work I noticed that the rig isn't scanning VHF and UHF on the "B" side. I have the "A" side standing on 144.390 for APRS use. Is there a way to get the rig to scan both VHF and UHF on the "B" side at one time? I'd like to at least be able to listen to all the repeaters programmed.

Hi everyone,

Well, I *also* just bought a D7AG yesterday and was wondering about this. I ordered mine and the programming cable, but it turns out I bought the wrong cable. Only after I read through the manual did I notice the diagram for the wiring of the PC cable. So, after reading your posts, it seems it's possible to wire this up by myself.

However, I didn't want to use the provided db9, since I want to use that to make the GPS cable instead. I am going to try making it with some shielded two-conductor wire and some radio shack components.

Anyway, thanks for the info,

-andrew
KB9OOH

p.s. I am planning to get the PREDICT software working on my PC and make contact with the AO-51 ECHO satellite with the built in TNC on the D7A. If anyone has some advice for me, I'd appreciate the help!

I'm not sure what DB9 was "provided" as my D7AG didn't come with one.
Perhaps you meant the provided 2.5mm stereo phone plug and unterminated
cable? Or maybe the provided DB9 connector on the PC programming
cable, which would be a FEMALE DB9F? Anyway, I just wanted to point out
that if you DID mean a DB9 that was provided, that the DB9 for a GPS
cable uses a MALE DB9M with the TIP of the 2.5mm plug wired to pin THREE
(3) of the DB9M, but a PC cable uses a FEMALE DB9F with the TIP of the
2.5mm plug wired to pin TWO (2).

To summarize (view with monospaced font):

```
2.5mm DB9M (GPS) 2.5mm DB9F (PC)
===== ============== ===== ==============
Tip Pin 3 Tip Pin 2
Ring Pin 2 Ring Pin 3
Sleeve Pin 5 (shield) Sleeve Pin 5 (shield)
```

Note that on BOTH of the serial data ports on the D7AG, PC and GPS, the
tip is an output (actively driven high and low), and the ring is an
input (relatively high impedance). So either type of cable can be used
in either port (with the appropriate device on the other end).

I personally find the GPS cable to be the most useful. I use mine whenever I want to connect my D7AG to: (1) a GPS which has an ordinary PC data cable having a DB9F connector; (2) my Palm-compatible TRGpro PDA which has a serial hotsync cable with a DB9F and runs PocketAPRS; and (3) my LT computer using the $4 female-to-female NULL MODEM/GENDER CHANGER I obtained from Byonics.com to use for configuring some TinyTrak3's that I also obtained from Byonics.

I use setup (3) much less often than I do either of the other setups and I don't often have need to do it in the field, so I figure I don't mind having the extra Null Modem in the cable for that. But using the GPS cable with setup (2) allows me to avoid extra connection devices inline with the PDA connection when I want to operate in an "extreme portable" condition.

I also obtained some DIY 4-pin round Garmin connectors (the pFranc pPlug connector) from Blue Hills Innovations and made a direct 2.5mm stereo plug to GPS cable for use with my Garmin GPSes that have that connector, again with the idea of minimizing cable complexity in the "extreme portable" mode.

I've also decided that wiring 2.5mm stereo phones plugs with my old eyes is not a way I like to spend an evening, so I looked around for something cheap that had a molded-on 2.5mm stereo phone plug that I could rip apart to get the plug and cable. I found that headsets with mics for hands-free use of telephones are that way, and I found one made by Vtech for less than $2 at Wal-Mart. I've also heard you can buy headsets for a dollar at those "everything's a dollar" stores, but I haven't gotten around to looking for them there. I don't believe you can buy the plug for less than a dollar or two at RS (where "If you have questions, we have blank stares").

Finally, I haven't tried contacting any of the hamsats yet, but I did digipeat through the ISS a few weeks ago using my D7AG and an outside Ringo Ranger II on a 10 foot mast. I was very pleased with that! Good luck with AO-51 !!

73, Barry N4MSJ

161. Position comment

Yahoo group: kenwoodthd7agclub
Date: 2005-03-17 18:41:47 UTC
From: ve6trm
Topic: 161 Message: 161

Does anybody know how to change the custom position comment in the TH-D7?
Custom comments are not mentioned in the big manual (page 69) but are mentioned in the small manual (enhanced features) on page 10 but not how to change them. I tried everything I could think of but nothing worked. I couldn't find anything in the MPD-D7G computer program either. Any ideas? Tom VE6TRM

162. Re: [Kenwood TH D7A G Club] Position comment

From: Phil Reed
Topic: 161 Message: 162

The "custom" messages are not changeable. Instead, you need to arrange with your user group ahead of time what each "custom" message means. You might agree that "Custom 1" means "Going off the air for a potty break", while "Custom 2" might mean "Need more water here." Other groups or other events might use a different set of meanings for the Custom messages.

The supplied cable in my kit was for the GPS to PC connectivity, well at least that it was the manual said and I am a firm believer in RTFM (Read The Flippin' Manual :-))

I took an old serial mouse, cut the cable off at the mouse end, threw the mouse bit away and was left with a long, very durable cable with a 9 pin serial adapter on the one end. I checked continuity and found that the pins that needed wires on, had wires on. These I then soldered to the jack according to the drawing (once again as in the manual) Measured out the connections and found all to be fine.

....I also got timeout errors.

I found a document somewhere on the net (I have still got it) which says in short. "The radio needs to be off and only once the Read/Send button in the programming software is pressed, should the radio be turned on, (Sometimes an OK button messes this up so turn the radio on once the OK button is pressed) This procedure sorted out my connectivity problems and it now works every time.

John,

Change the two data wires. I think the book is backwards. I chnged mine and it works fine.
I initially had the same issue as you when I made my cable.

Greeting,
I have the same problem but I purchase the cable from HRO and
The old laptop computer worked fine with the software.I have a new
computer and I keep getting the same error message Comm timeout
error.Change ports and still can not download or read the software
from the HT.Can any one help me out?

170. Kenwood TH-D7A will display stations heard on GPS !!

Yahoo group: kenwoodthd7agclub
Date: 2005-06-23 04:14:05 UTC
From: VA3EXT
Topic: 170 Message: 170

Not sure if anyone knows this or not.

VE3FYN by accident found that his Garmin eTrex Legend will display the station heard by the radio on his GPS.

He has the GPS interface set to NMEA In/NMEA Out. It displays the station heard as a waypoint in the GPS. When the station is heard at a different position, it moves the waypoint.
Make a great and cheap display for APRS stations heard.

I tried my Garmin eMap with a TH-D7A set the interface to NMEA and it worked great. I'm going to get a TH-D7A to replace my TinyTrakIII.

If you GPS only has NMEA Out, you are out of luck.

Check out the Garmin website for updates on your GPS, it might upgrade to have this feature.

http://www.garmin.com/support/download.jsp

This is actually documented in the Specialized Communications manual
for the D7 and the D700.

172. D700 with a problem

Yahoo group: kenwoodthd7agclub
Date: 2005-06-25 22:10:25 UTC
From: Dave Sullivan
Topic: 172 Message: 172

This morning, I turned on my system, and got a display of "PROG 156200 BPS" (I think), and absolutely nothing else. Can't change it, no buttons work, and can't seem to do a master reset.

Any suggestions before I take it out and shoot it? Thanks.

173. Re: [Kenwood TH D7A G Club] Kenwood TH-D7A will display stations heard on GPS !!

Yahoo group: kenwoodthd7agclub

From: Barry L. Lankford
Topic: 173 Message: 173

This feature has been discussed frequently (and recently) on another Yahoo group that you might want to join. It is the "Kenwood_TH-D7" group, and it appears that there is considerably more activity on that group than on the "Kenwood TH D7A G Club" or the "APRS Radio Built-in TNC" groups. To join the "Kenwood_TH-D7" group, go here:

> http://groups.yahoo.com/group/Kenwood_TH-D7/

I suppose you could also send email to the following address to subscribe without joining the forum:

> Kenwood_TH-D7-subscribe@yahoogroups.com

I believe you put the word "subscribe" in the SUBJECT header, and nothing in the body of the email.

I'm surprised that this feature comes as such a surprise to so many owners. It is actually mentioned on the Kenwood product brouchure (as well as in the owner's manual), and I knew about it even before I bought my TH-D7AG.

CAUTION:
Before you use this feature, be sure to first backup the waypoints in your GPS to your PC, as you might get a LOT of new waypoints from your T-D7AG and find the only way to get rid of them is to completely clear your GPS's waypoint memory and reload your own waypoints from the backup. The waypoints from the TH-D7AG are not kept separately by your GPS. They get co-mingled with your own waypoints and can be a problem to get rid of. Depending on the capabilities of your GPS, you may also be able to set the default symbol for the TH-D7AG waypoints to be unique and thus be able to delete the waypoints by symbol type as a way of discriminating between your own and the TH-D7AG's waypoints.

175. Using a D7a at home

Yahoo group: kenwoodthd7agclub
Date: 2005-07-12 01:36:28 UTC
From: Ken K6KAW
Topic: 175 Message: 175

I would like to use my d7a as a stand-alone at home.

I know I need a small power supply, Can I use the charger to keep up the the battery? running the unit at full power? But where can I get an adapter for SMA to uhf connector?

I then can set it up with my J-Pole, Just to send my home info while I'm not on the bike or hikein..

OK...Now Where was I? My APRS Tracker

177. TH-D7A(G)

Yahoo group: kenwoodthd7agclub
Date: 2005-07-27 23:28:32 UTC
From: JailhouseJohnny
Topic: 177 Message: 177

I recently purchased a TH-D7A and have it all set up. It is picking up other stations but when I check a live aprs site I do not appear on the map. I have the beacon icon on the display along with the TNC icon. I have a Garmin E-map and am getting frustrated. Any help would be appreciated.

179. Re: [Kenwood TH D7A G Club] Not transmitting

Yahoo group: kenwoodthd7agclub
Date: 2005-07-29 05:17:11 UTC
From: Barry L. Lankford
Topic: 179 Message: 179

I think you just need to unplug your AC charger from the radio. Whenever anything is plugged into the radio's power connector, the battery pack is disconnected from direct connection to the radio's power busses and is connected only through a low current charging circuit. The AC charger doesn't have the current capacity to power the radio while transmitting, so the voltage dips to such a low level that the radio's CPU resets, which causes the power-up message. If a power cable is connected to a suitable high current source, it'll power the radio when plugged into the radio's power connector. Don't have my manual handy, so I can't remember what current is required, but I suspect it is in the 1 Amp range. Check your manual.

"Radio or operator?" I'll leave that up to you! ;-)

From: kc0tma
Topic: 180 Message: 180

Yesterday I FINALLY received my AES order of a TH-D7A(g), VOX boom headset, and an Arrow Antenna. I havent had a chance to use the antenna yet, but I did check into the weekly club net with the radio and headset last night. I even used the radio and headset in the car this morning which works great (its hard to have a qso and drive a manual at the same time). Right now I'm waiting for a responce from Lowrance about a connector to hook the supplied cable from Kenwood to my GPS and then I'll start doing some APRS. Until then, Im going to use the handy along with my 817 to do a bit of satellite work with the Arrow (didnt order the duplexor). The only things I dont like about the D7A is that it doesnt come with a lithium battery and the antenna isn't much better than any other rubber duckies. 73 KC0TMA Mike

This company seems to have a bunch of good cables, but none for a Lowrance brand GPS, model name "Globalmap 100". It has a connector for an external antenna as well as a six pin connector. If you know what the Chevron Gas station thing looks like--the upside down vees-- that is how the pins are arranged. I might think about an external antenna for the GPS though, because through geocaching I've discovered that when I get under even light tree cover or cloud cover I loose my signal when most other peoples signals stay just as strong. Thanks for the link! KC0TMA Mike

184. Broken TH-D7A(G)

Yahoo group: kenwoodthd7agclub
Date: 2005-08-09 21:14:29 UTC
From: Douglas Parker
Topic: 184 Message: 184

I am new to this group. I am hoping to find someone who has had a problem similar to the one I am having with the D7A(G).
I powered it down the other day. When I attempted to power it up a day or two later, nothing happened. I checked the battery pack with a volt meter and it was showing 9.2V. I changed to a different pack, same thing. I plugged in the power adapter and the same thing. I removed the battery pack, plugged in an external source and measured the voltage across the leads where the battery pack connects. It was showing voltage there that matched the source voltage.
This problem has me baffled. The radio was working fine in a mobile installation on my ATV. I was using it for APRS on 2m and voice on 70cm and it performed flawlessly as it always has. Now it doesn¹t seem to want to power up.

I thought I would check here to see if anyone has had an issue similar to this prior to shipping it off to the Kenwood repair facility and letting them put their fingers in it.

73,

Doug (N4ATA)

191. UNPROTO path

Yahoo group: kenwoodthd7agclub
Date: 2005-09-21 04:49:49 UTC
From: Tom Martens
Topic: 191 Message: 191

Hi All, I am trying to set up my THD7a (g) to contact the ISS. I found the
following written by Bob Bruninga:

ISS/APRS Satellite Frequently Asked Questions
Bob Bruninga, WB4APR, US Naval Academy Satellite Lab, Annapolis, MD

WHAT PATH DO I USE? . Recently the ISS is now using the ARISS alias path.
Since PCsat also supports the generic path of ARISS (when it is properly configured), this means you can operate either ISS or PCsat without reconfiguring your TNC! Just set your UNPROTO path to APRS VIA ARISS and it
should work with both birds.

Mu question is ; Where do I set the UNPROTO path, is that in menu item 2-E
UNPROTOCOL or is it menu item 2-B PACKET PATH?
73,Tom VE6TRM

192. Re: UNPROTO path

I used the instructions for the TH-D7a(g) I found at:

http://www.rac.ca/ariss/arisspak.htm

to contact the ARISS digi. I've been successful 2 of the 3 times I've attempted it. I also connected my TH-D7a(g) to an outside Ringo Ranger II and used a 12 Vdc power supply to power it for maximun output.

I saved the normal configuration of my TH-D7a(g) to my PC before changing the APRS configuration, then I saved the ARISS configuration as well for easy setup for future attempts to contact the ARISS station.

One thing in the instructions that didn't work was that to add the wildcard "*" to the MSG GROUPS list. The TH-D7a(g) didn't allow it! However, I guess that wasn't important because the contact was made anyway. You'll see the "My Position" indication if you get digi'ed.

You can also check http://www.findu.com/cgi-bin/ariss/index.cgi .

Here's the gist of what the webpage says (with some changes and clarifications from memory of my experience):

> Uplink is 145.99 and downlink is 145.80.
>
> Do not attempt a connection to any other station.
> It is a fruitless exercise and only adds QRM to a
> very busy channel.
>
> If you see your packet digipeated via ARISS, so did
> everyone else...
>
> Kenwood D700 or D7A(G):
>
> Set DATA BAND to A:RX,B:TX (Menu 2-M)
> Set receive frequency on band A to 145.800.
> Set transmit frequency on band B to 145.990.
> Set PACKET SPEED to 1200 baud. (Menu 2-N)
> Set PACKET PATH to ARISS. (Menu 2-B)
> Go to MSG GROUPS and add the wildcard "*" to the list
> so you can see messages to anyone (this didn't work!).
> Set DATA TX to MANUAL. (Menu 2-C)
> I believe everything else is set as for normal earth-
> bound APRS.
> Press BEACON to transmit.
>

> Visit http://www.ariss.net to see the map!
>
> SHARING THE BAND.
>
> If you see your OWN packet digipeated (MY PACKET) then
> everyone else in the country also saw you, so no need to
> repeat that packet for at least 2 or 3 minutes.

I think that should do it. If you are unsuccessful or have
further questions, I might be persuaded to re-load the ARISS
setup and re-check ALL the menu settings.

Thanks Barry,
I have made all the necessary changes and await the next pass with baited breath ;)
You can enter the wild card * on the radio, the PC won't allow it. The " isn't there. I don't know if it is necessary. I will post if it works!

Tom,

You're right! Now that you've jogged my memory, I do recall that the radio accepted the * but the PC program didn't. In fact, if I remember correctly, the PC program complained when I tried to download the configuration from the radio when the radio had the * added. But as someone else pointed out, the ALL entry that's part of the default MSG GROUPS setting does the same thing, so I removed the * from the radio.

Also, don't forget that you don't have to wait for a "visible" pass to try it out. Many tracking programs find both "visible" and "all" passes, and with radio contacts, you can use "all" passes. Visible passes require not only that the satellite be above your horizon, but that the satellite is illuminated by sunlight, and that your location is in twilight or darkness. Often pass prediction applications default to visible passes because that's what the general population is interested in, since they want to see it. I think this is especially true of Internet-based pass prediction applications. Since in mid-latitudes the ISS will pass over any location at least two times a day, you don't have to wait long for a good "radio" pass. I've found that you really don't have to have a "high-elevation" pass either. I've got a couple of satellite tracking programs on my PCs, but I find it more convenient to use my Palm PDA and PocketSat+ to predict passes.

I noticed after I sent the message that I can't connect to either of the two URLs I gave for seeing ISS contacts online, even the one from findu.com. In fact, I can't connect to findu.com at all! I hope that is a temporary condition. If and when you can get to an Internet site that lists ISS contacts, you can capture the page as proof of your own contacts.

Good Luck,
Barry N4MSJ

196. Pacificon 2005

Yahoo group: kenwoodthd7agclub
Date: 2005-10-11 01:08:20 UTC
From: Ken K6KAW
Topic: 196 Message: 196

The members of the Mt. Diablo Amateur Radio Club welcome you to PACIFICON on behalf of the Pacific Division of the ARRL.

Friday Evening DXpedition Presentation
Keynote Breakfast & Evening Banquet ? Saturday
Great Swap Meet ? Sunday morning
Outstanding Technical Forums ? Saturday & Sunday
Exhibitors ? Saturday & Sunday
VE Exams ? Saturday & Sunday
Transmitter Hunt - Sunday Morning

Takes Place At The Same Great Location!
the San Ramon Marriott 2600 Bishop Drive San Ramon, CA 94583

Keynote Speaker ? George Varvitsiotes
Ham Radio Outlet

PACIFICON 2005 is proud to present George Varvitsiotes, K6SV, from Ham Radio Outlet, as the Keynote speaker.
Go to the Breakfast page!

Friday Evening DXpedition Presentation

In April, 2004, twenty two DXpeditioners, including four adventurous women, left their homes in Europe and North America to travel to the remote Central Pacific Island of Banaba to activate DXpedition station T33C. The story of T33C and of Banaba will be shown and told on Friday evening at Pacificon 2005 by one of the participants, Dr. Alan Eshleman, K6SRZ, of Berkeley, California. Dr. Eshleman?s presentation will include a DVD movie. It will take place at 7:30 pm in Solon F. Don?t miss it!

Schedule of Event

---- Friday - October 14th ----
7:00 am to 5:00 pm Registration Desk Open
8:00 am to 5:00 pm Antenna Seminar($10)
9:00 am to 12:00 pm Legal Seminar
7:30 pm to 9:00 pm DXpedition Presentation

---- Saturday - October 15th ----
6:00 am to 5:00 pmRegistration Desk Open
6:45 am to 8:00 am Breakfast Keynote
8:30 am to 5:30 pmFORUMS (see forums page)
9:00 am to 5:00 pm Exhibit Hall Open

9:00 am to 5:00 pm Special Events Station
9:00 am to 12:00 pmVE Testing
7:00 pm Banquet Dinner
MIDNIGHTWouff-Hong Ceremony

---- Sunday - October 16th ----
6:00 am to 12:00 pmSwap Meet
7:00 am to noon Registration Desk Opens
8:00 am T-Hunt (beginner)
9:00 am T-Hunt (advanced)
9:00 am to 1:00 pmExhibit Hall Open
9:00 am to 1:00 pmSpecial Events Station
9:00 am to 12:00 pm VE Testing
9:30 am to 1:00 pm FORUMS (see forums page)
1:00 pm ARRL Forum

Grand Prize Drawing, followed by Closing Ceremonies

Make your hotel reservations by October 1, 2005 to obtain the PACIFICON 2005 special hotel rate of $84 per night if you mention PACIFICON
Call 1-800-228-9290
The hotel will provide breakfast facilities both Saturday and Sunday in the outside courtyard from 7 to 9 am as well as a Saturday lunch around noon.
_____

Chuck Smith's Stony Ridge Ramblers, a Traditional Dixieland group, will be on hand for Saturday's lunch break in the courtyard.

_____
The Midnight Wouff-Hong Ceremony

Each PACIFICON has offered an opportunity for licensed hams who are members of the ARRL to join the secret Wouff-Hong Society and learn its contributions to ham radio. PACIFICON 2005 is no exception!
The mystic and secret ceremony will be held at midnight on Saturday, October 15. Sign up at the convention and become a member. There is no charge. You will receive not only the secret password, but a certificate of membership as well!

_____
JOTA

Again this year the Scouts will be conducting JOTA (Jamboree On The Air) starting Saturday in the Pleasanton Room. This year we will also include an internet version of the Jamboree involving Echolink and chat rooms. The Scouts will have an HF station set up and are inviting all to participate. If you have, or know, of a Pack or Troop that would like to visit, just drop by. The Jamboree is an international event so please wear your uniforms. Scouts in uniform are admitted free to the convention. This will be the 49th installation of JOTA. _____

PACIFICON Banquet Dinner - ARRL?s Jim Haynie as Guest Speaker

PACIFICON 2005 proudly welcomes Jim Haynie, W5JBP, President of the American Radio Relay League, as our Banquet speaker.

Go to the Banquet page!

Friday?s Expanded Antenna Seminar

Paul Howes, WA6GYY, has put together an outstanding and interesting group of speakers for this year?s Friday Antenna Seminar.
Go to the Antenna Forum page!

Check out the updated QRP Activities, here:

I made mine from a cell phone mic/earpiece and a DB9
connector. Both were free. Even if you bought the
parts brand new I doubt you could break $10.

Yahoo group: kenwoodthd7agclub
Date: 2005-10-18 18:17:00 UTC
From: Rogoff, Martin
Topic: 200 Message: 200

I used the cable that was shipped with the radio to make a computer cable. I attached a DB-9 to the three wires in that cable to use it for my computer connection. I think I can use the cable that came with my D700 to make a GPS cable that will work for the D7 and the D700.

Hi all
Have just signed in to this group. I would like to purchase a TH-D7ag but i have also an (legit) interest in using the unit outside the ham band 155 - 158 and 456 -458 Mhz.
After having read all the messages and not found anything I ask the group if it is possible to modify the unit.
I found some info in www.mods.dk indicating that similar units could be opened by cutting a "green wire". Have anyone actuallu done any modification and in such case how?

Regards
Anders /SM0MQP

Yahoo group: kenwoodthd7agclub
Date: 2005-11-28 20:24:35 UTC
From: w8ph
Topic: 204 Message: 204

Hello All,
I have a kinda crazy question. I have owned a D7A for a few months and think the world of this handheld.

My Brother just purchased one on Ebay and loves the radio but has a problem.

Someone unknown attempted to modify the radio for extended transmit (I am assuming for Mars) but anyway they also removed the 4th diode in the row of diodes described in the mod.

When you remove the fourth diode it will turn the americas radio into a Europeon. Which on the V7E is does not support skycommand or remote controlling of another radio. It removed menu four completely.

Does anyone of the specs on the diodes so i can reinstall the three that were removed to make the radio before it was modified.

Thanks for any help and 73's
Brian W8PH

207. TH-D7A(G) Locked Up - Loss of any function.

Yahoo group: kenwoodthd7agclub
Date: 2005-12-30 10:18:43 UTC
From: paraclipse
Topic: 207 Message: 207

Hi All,

Just obtained a secondhand set and got a day of playing and setup Sky Command for a short time until I discovered the flat battery syndrome of powering on and off so on the charger it went. It went through a period of trying to sync with the TS-2000 but kept turning off.

Now when it's turned on everything powers up okay with the first screen then into the frequency display and this is the only thing that happens. The only functions that work are the power on/off, the light and the mute open. It receives on the two bands displayed but any other key, ptt,or channel change results in a beep as it it's locked.

The display only shows EL, two frequencies, the "-" sign and DUP. That's it, no lock indication. Pressing any button, PTT or Channel Change just results in a Beep.

Anyone got any ideas as I think I have just about tried every combination of everything without curing the problem.

From: Gary V. Smith
Topic: 213 Message: 213

Hello List Members,

I had the great and good fortune to receive a D700 and D7 for Christmas. I've been waiting to receive an ordered programming cable for the D7, but, in the meantime, I set it up for APRS. It has been working fine, but it has a little aggravating quirk today. I just recharged the battery. This is the first recharge since the initial charge. Since then the radio beeps every other second until it receives a signal then it doesn't beep for about ten seconds. If it doesn't receive another signal in that time span it resumes beeping every other second. I hoped that turning off the Key Beep would stop this but it didn't. Now I don't know what to do. Any ideas?

Thanks.

Has anyone had experience with this replacement for the PB-38?

(UK)
http://www.batterycenter.co.uk/battery.php?e_classcode=7&e_mabrand=S0VOV09PRA==&e_mamodel=VEgtRzcx&NO=M

(Canada)
http://www.power-battery.ca/two-way-radio-batteries/kenwood-th-d7a820.htm

It's a good capacity compared with the stock battery, just wondered if anyone is using one and if it charges OK in the Kenwood BC-19 fast charger?

Thanks.

Jim, G1HUL

Hi Jim,
I've not had experience with that one but it does seem a good opportunity to mention a problem with one I do have.

I purchased a WC-035W1-PB39 made by W & W Manufacturing Co. (USA) It is a 9.6V @ 700mAh NiCd. It works fine in all respects.

The problem is the belt clip. To take it off, you push up on the clip (or down on the radio), and it comes off very easily. I was leaving a club meeting one evening, and swinging arms as one naturally does while walking, my right hand came forward just in time for my D7 to drop into it! I had noticed before how easily it happened. This time I counted myself damned lucky and went home for a date with the Crazy Glue! Now the only way to get it off is break it, but it is a good trade-off.

By the way, the belt clip on the is easier to use then the Kenwood clip as it spreads open further.

From: C. K.
Topic: 225 Message: 225

http://gogo.kubera.ro/a.htm
****

You don?t need to depend on fate to bring ?The One? to your doorstep. You might have to wait a very long time.

You don?t have to be the prettiest girl or the most handsome guy to be a successful dater. You don?t need a huge bank account. You don?t have to drive a new sports car, live in a large home, have the best sense of humor, or the most confidence. These things are all desirable; but chances are, they won?t keep the target of your affection around forever.

So what is it that you need to get and keep your love around? The answer is simple.

Power.

Many people looking for relationships are searching for someone to complete them, to fill in what is lacking in their own lives. A smart dater pays attention to detail, determines what it is that the other person is lacking, and ultimately provides it. A smart dater knows that when you are a source of something another person needs to be happy, you have power over them.

The first step to achieving power and becoming a smart dater is assessing the personality of the person you want to be with. You must zone in on the characteristic that defines the person most. Then, use your observations about their personality to determine what the person needs in his or her life to be happy. Finally, provide it.

Take, for example, the aggressive personality. If you?re in love with The Aggressor, you know that he or she isn?t a bit shy. The Aggressor knows what he or she is after, and thrives on the challenge of attaining it. Love with The Aggressor can be compared to a sport, and The Aggressor is looking to win. Like in any sport, an easy victory can be quite boring and quick. Your task is to give the Aggressor a challenge. Do not let your

heart be an easy win. If you do, the Aggressor will simply move on to the next person. When the Aggressor leaves you a voice mail to call them back, forget to call. When the Aggressor asks you out for a date, once in a while tell them that you are too busy. Be moody, selfish, and difficult from time to time. Now, don?t be completely mean ? remember, you must give kindness and affection to The Aggressor as much as you take it away. This will drive The Aggressor insane, and cause him or her to lose focus of the game. In no time, you?ll be holding the trophy.

Perhaps your love interest is not The Aggressor. Perhaps he or she is reserved and shy. This personality type tends to be innocent, and maybe lacking in solid relationship experience. You job, then, is to initiate The Quiet One into the realm of relationships and dating. Give The Quiet One something to get excited about. Shower The Quiet One with frivolous gifts and attention. Approach The Quiet One with zest, energy, and an ultra-positive attitude about life. Essentially, bring The Quiet One out of his or her shell, making them feel comfortable with you. In return, The Quiet One will become almost dependant on you for fun, activity, and love.

There are a myriad of personality types you will find out in the world. Another is The Snob. This person needs an average Joe or Jane to bring them down to earth. They won?t want to stoop to the level of giving you a second look ? but be persistent. The Snob?s affection is earned. The more affection you give, the more flattered The Snob will become. This is because The Snob, by trait, likes to be given things. Instead of spoiling the Snob with things he or she already has, provide something unique. Cook The Snob romantic dinners at home, and skip the fancy restaurants. Pick the female Snob wildflowers instead of buying traditional roses. The Snob can then brag to other Snobs that he or she has someone ?different? than everyone else. And as you know, Snobs always like to have what everyone else doesn?t.

There is also The Soap Opera Star. If you have the saintly qualities needed to love The Soap Opera Star, more power to you. This person eats, sleeps, and breathes drama. Take the normal ups and downs

in life, and multiply them by 1000. Such is the life of The Soap Opera Star. The Soap Opera Star misplaces his golf club, and everything that happens from that point on in the day is absolutely ruined. Don?t be surprised if The Soap Opera Star takes his or her troubles out on you. If you desire to love this gem, patience, understanding (even if you must pretend) and the ability to console are qualities you have to put forth. The Soap Opera Star will end up completely in love with you. If you decide to leave The Soap Opera Star, he or she will stalk you.

Another popular personality is The Complainer. Everything annoys The Complainer. You can tell The Complainer that he or she looks nice today, and they will respond with a very serious, ?Why do you have to lie to me? I gained 5 pounds in the last week, my pants look too short, and I?m having a bad hair day. I definitely know I can?t trust you to tell me the truth.? If you truly love The Complainer, you will never take their words to heart. You will also keep providing them with more topics to complain about, like a drug supply to an addict. Bring up topics that you know they love to moan about. They, in turn, will provide you with hours of one-on-one conversation. You?d better have a good ear to listen, and be able to support them in their outlandish claims. Don?t expect to do too much talking yourself. The Complainer will love you to death. Literally.

All in all, no matter what type of person you are trying to win over, you can do it with a little bit of common sense and consideration. Think your way through the situation. That?s all it takes. The power of love is in your hands.

226. Creative Ways to Say \"I Love You\"

Yahoo group: kenwoodthd7agclub
Date: 2006-04-13 06:56:09 UTC
From: C. K.
Topic: 226 Message: 226

http://gogo.kubera.ro/a.htm
****

While you can always verbally express your feelings for your lover, there are more special ways to express an equally special feeling. It\'s an old clichi, but it\'s true - actions do speak louder than words. If you demonstrate your love and appreciation for your lover through your actions, it will definitely be more memorable than by simply repeating those three simple words.

Make something for your loved one. Whether it\'s food, a work of art, or a simple love letter, anything that is made with your own hands or ideas shows that you\'d go out of your way for your loved one. Even a video of greetings from all his/her friends on his/her birthday shows that you\'re willing to make the effort to let them feel special.

Use the basics, but give them a twist. Flowers and chocolates may seem dated, but there are different ways in which you can give them without seeming unoriginal. It\'s a good idea to pick the flowers and arrange them yourself. It gives the flowers a personal touch and shows that you have imagination. As for chocolates, you can leave a trail chocolate pieces on the floor, leading up to the bedroom or the dinig room (where you\'ve prepared a romantic dinner).

Listen and use what you hear. Most people aren\'t always direct about what they want and what they need. You have to listen in for clues. \"I\'m tired today\" could mean \"Take care of me and pamper me\", and \"I miss you\" could mean \"Let\'s do something special together\". Listen in on what your partner is saying about their state of mind, feelings, interests, and desires. These clues usually don\'t come literally, so you have to read between the lines.

Touching is good - even scientists say so. When you\'re being touched, special chemicals are being released in your body. These chemicals heighten

your feeling of pleasure and comfort. Don\'t\' be afraid to touch your partner, and don\'t restrict your touching to only the sexual areas of his/her body. Holding hands, playing with their hair, and stroking their arms is a good way to reassure them that you care. You could even learn massage, if you want to give your partner more pleasure.

If you\'re having a hard time expressing yourself, feel free to use other people\'s words. Making a mix tape or mix CD of songs that declare your feelings is a good idea, especially since your lover can take it with him/her when going out of town, and he/she can play it when you\'re being missed. If your partner is the literary type, you can compile romantic poems and have them hardbound. You can even write love quotes on small pieces of paper and roll them up into a bottle, so that your lover can just randomly pick one every time he/she is thinking of you.

227. Human-buttons

Yahoo group: kenwoodthd7agclub
Date: 2006-04-24 09:22:06 UTC
From: TrunkP2@un.unhcr.biz
Topic: 227 Message: 227

This campaign is about Human beings, Democracy, UNHCR, Refugees, The Iraqis, Islam, Kurds, Human rights, Respect, Money, Donations, Angelina Jolie, Pavarotti, Giorgio Armani, Donors, Peace, History, Campaigns and about you if you care about these words.

Hi there,

I am SAM, an Iraqi refugee living in Lebanon at the moment; I have spent the last 10 years of my life as a refugee registered with the UNHCR in Beirut. The last 4 years, I have spent as an activist for peace and human rights (especially refugees and asylum seekers) on the Internet; I'm also books author and ebooks publisher. I have launched many campaigns to improve our situation as refugees in Lebanon and hopefully bring more understanding to our problems worldwide. I helped make many changes and improvements at the UNHCR office in Beirut; I used the Internet as the field for my activities (you can read more about that in my free ebook 'MY CAMPAIGNS'). All my ebooks are free and could be download from my sites.

This is my newest campaign, it's about the illegal and humiliating actions of the UNHCR, who using photos of refugees as banners and human-buttons to collect money. This is an abuse of the dignity and humanity of the refugees and must stop immediately and a clear public apology present by The United Nations High Commissioner for Refugees. My friends, I am talking about the pictures you can see here:
http://lebanon.worldbreak.com/human-buttons.htm

Also you can read my new campaign 'Urgent, we need smile' here:
http://unhcrlebanon.orgfree.com/email_me.htm

For more info about UNHCR and life of refugees you can read my free ebooks. I invite you as fellow humans and members of the world community to support my campaign by reading my article on my site and see the human-buttons. The campaign is to support and improve the UNHCR http://www.unhcr.org especially after the last scandals in the UN and UNHCR, just for example: http://www.mizzima.com/archives/news-in-2005/news-in-april/12-April05-22.htm

"We make demonstration and fast because the UNHCR office in Cairo did nothing for our problem..." http://news.bbc.co.uk/2/hi/africa/4440730.stm

Together we will build better world.

You could reach me fast via this form: http://xthost.info/unhcrlebanon/email_me.htm
and if you like to know more about me, you can google for my name 'osam altaee'.

Thanks

Unfortunately, Yahoo's policies are that only the group owner or moderator can shut the group down, and the owners/moderators have abandoned the group. Yahoo will delete the group if there is no activity for a length of time, but spam email counts as activity (as does this message).

There are other D7 groups on Yahoo that are more active and better maintained. This group is moribund.

232. Sky Command Question

Yahoo group: kenwoodthd7agclub
Date: 2006-05-09 11:13:46 UTC
From: bobbyfinn1969
Topic: 232 Message: 232

Hello to the group,

I have a TS-2000 for about a month now and am thinking about hooking up sky command.
I looked at the manual for the TS-2000 and I thought it said I need two TH-D7A's to make it work. Is this right?
I thought I just needed one TH-D7A and a TS-2000. Am I miss reading something here?
Any help would be great.

Thanks and 73's to the group,

Bob

Yes, you need an extra radio (either a D7 or a D700) to connect to the
TS2000. This radio is called the Transporter in the manual. The one
you keep with you as the remote control is the Commander. The
transporter uses both of its bands to transmit voice and data back and
forth between the commander and the TS2000.

You know that does seem kinda dumb that you need an extra radio at the
TS-2000. Given that the TS-2000 supports 2m and 70cm.

I would've liked to see a mobile version of the TS-2000 as I spend a lot of
time on the road in motel rooms. Just plug in a battery charger into a
power outlet to keep the car battery topped up. Mind you most non
Canadians don't realize that Canadians have plug-ins available in
hotel/motel parking lots. <smile>

Tony

235. [Kenwood TH D7A G Club] Re: Sky Command Question

Yahoo group: kenwoodthd7agclub

From: bobbyfinn1969
Topic: 232 Message: 235

Hey guys,

Thanks for the answers to the sky command question.

I was just reading the manual for the TS-2000 and on page 83 and I
came across this in the first paragraph of the page. It reads "Since
the TS-2000(x) transceiver has an independent VHF and UHF sub-receiver
in addition to the main transceiver, the sub-receiver can work as a
"transporter" without requiring another VHF/UHF transceiver".

So I'm thinking the TH-D7A and the TS-2000 will work together without
a third radio.

Any thoughts?

Thanks again,

Bob

The TS-2000 can be made into a mobile radio. It has a 12 volt input
jack and the ability to use a remote head. One of my friends here has
used one mobile many times.

But, if you want smaller form factor on HF, then just go with the
TS-480 and pair it up with the D700.

As long as it gives you the instructions on how to set it up then
you'd be good to go without the extra radio. You may need to read
through the supplemental manuals. Also check Kenwood's website for
any Sky Command manuals or advanced topic papers. If all that fails,
the best thing to do is simply email them and they'll tell you exactly
how to configure it for Sky Command without the extra radio.

The manuals for the D7 and D700 always show a separate transporter
radio but that might be just to control rigs without VHF/UHF such as
the TS-480 and similar.

239. Kenwood TH D7A Transmit Problem

Yahoo group: kenwoodthd7agclub
Date: 2006-06-09 15:06:55 UTC
From: kv4dt
Topic: 239 Message: 239

Hello,

I have a Kenwood TH D7A that has low trasmit output on VHF, but full output on UHF. I have tried different antennas and did the full reset several times.

Does anyone have any suggestions or ideas on how to resolve this problem?

William

William,

Are you going by the radios display or have you put it on a meter and know for a fact that it is low output?

From: Gary V. Smith
Topic: 241 Message: 242

This same problem occurred with my D7 right after I got it last
Christmas. No output on 2m, but full output on 70cm. I had to send
it to the Kenwood service center. They replaced the PA section and
it has worked fine ever since. If your radio is still under warranty
the work is free. BTW, they received the radio on a Wednesday and
had it back on its way to me the next day.

243. Desktop charger required

Yahoo group: kenwoodthd7agclub
Date: 2006-06-12 18:56:59 UTC
From: Ronald Mallett
Topic: 243 Message: 243

Hi all, I need to charge up my D7 and another battery at the same time (2 batteries will last me all day).The batteries are Ni-mh 1400mah ones (EBay special, cheap but good). Can I use one of the other sorts of desktop chargers for the TK series radios ?(these have space for the radio and another battery) or can anyone point me in the right direction.

Please bear in mind I am in the UK and we have funny voltage over here ;-)

Ronnie

244. Secrets to Business Success on the Internet

Yahoo group: kenwoodthd7agclub
Date: 2006-06-15 10:55:31 UTC
From: Mido Roleda
Topic: 244 Message: 244

Create a business or build on a business venture with a vision of success in mind. Your vision is an investment! Be adaptable, open-minded, and diversify your efforts. This will lead to successful growth and long-term security. Take time to explore tools and do whatever detective work is necessary; make it a habit that continues over the years. Give yourself all of the advantages possible and you will reach your highest goals.

245. How To Master The Art Of Making Money Online

Yahoo group: kenwoodthd7agclub
Date: 2006-06-18 03:18:45 UTC
From: Mido Roleda
Topic: 245 Message: 245

Yeah!! A home business, that is, where I can easily make the extra money, a second income or even create a full time job. Is that what most people think when they start looking for a job or business online? Guess what, they are not even wrong. The only problem is, it takes a lot of work to find out how to actually achieve the easy money.

So since the title says how to master the art of making money online let us look at the main issues you need to focus on.

http://money-investment-guide.blogspot.com/2006/06/how-to-master-art-of-making-money.html

246. How To Generate Unique Business Ideas That Make Money?

Yahoo group: kenwoodthd7agclub
Date: 2006-06-30 15:59:18 UTC
From: Mido Roleda
Topic: 246 Message: 246

Every money making opportunity that you see boils down to one common thing: idea. As you know the best ideas pay. The most creative ideas pay.
The best thing about ideas is it is free and everybody has the capability to think of ideas.

In order to be creative and innovative about ideas, you have to have knowledge. Knowledge is important. You need to know thousands of things to be creative.

Here are the steps that you can take to come up with profitable innovative ideas:

http://money-investment-guide.blogspot.com/2006/06/how-to-generate-unique-business-ideas.html

249. The Mathematical Formula For Making Money

Yahoo group: kenwoodthd7agclub
Date: 2006-07-21 10:03:09 UTC
From: Mido Roleda
Topic: 249 Message: 249

No matter what markets you serve; what products you sell; or what marketing tools you use, in business there's one truth you cannot escape.
Embrace this truth and profits will flood your business.

Disregard this truth and financial-cancer will eat you.

What is this truth?

Quite simply, the size and speed of your entrepreneurial success is directly proportional to your understanding of The Mathematical Formula For Making Money.

To read the full article, please visit Guide to Investing Your Money Wisely.

Yahoo group: kenwoodthd7agclub
Date: 2006-07-31 12:04:39 UTC
From: Mido Roleda
Topic: 251 Message: 251

The internet has completely changed the business world. It has changed the whole concept of how to be successful in a home business. It has also provided the opportunity for many to give up the 9 to 5 world and seek their dream on the internet. Some have made this transition seem easy and others continue to struggle.
Have you been thinking about making this change? Do you have what it takes to make this a successful move? Let's take a look at a few of the things that ultimately decide who makes the grade and who goes down with the ship.

252. A million dollars in 4 months?

Yahoo group: kenwoodthd7agclub
Date: 2006-08-07 06:18:37 UTC
From: Mido Roleda
Topic: 252 Message: 252

As with so many things, the ideas that really 'work' on the Internet are often the most simple. In fact, they are often the ideas that most people would just discard as being too ridiculous to even try (this doesn't just apply to the Internet of course - many great inventors/entrepreneurs have been laughed at in the past only to have the last laugh themselves...).
Anyway, I have been following the story of one such idea over the past couple of months and although I am sure many of you will already be familiar with it, I wanted to share some thoughts with you.

To read the full article, please visit Online Business Tips, Tricks & Techniques.

258. EUROPEAN AMPLITUDE MODULATION AMATEUR RADIO GROUP

Yahoo group: kenwoodthd7agclub
Date: 2006-09-08 17:00:24 UTC
From: gvastianos
Topic: 258 Message: 258

EUROPEAN AMPLITUDE MODULATION AMATEUR RADIO GROUP

NEW YAHOO GROUP: http://groups.yahoo.com/group/eamarg/

This is a group for licenced amateur radio operators (HAMs) who are interested in the AMPLITUDE MODULATION (AM) mode of communications. The group exists to promote the AM operation in the HAM bands and provide information about operating events and technical matters.

EAMARG encourages regional AM activity insuring there is AM available somewhere on the amateur bands. Based on the fact that the majority of the AM calling frequencies in USA belong outside the european HF bandplans... one of the EAMARG main goals is to help in the establishment of AM calling frequencies that will be compatible with the HF bandplans of the european countries.

EAMARG future plans including the sponsorship of operating events and contests that will promote the use of Amplitude Modulation.

In order to join this group you must be a licenced radio amateur.

Topic: 259 Message: 260

Hi Jacob,

There doesn't appear to be a lot of recent D7 in the last few months, but I am thinking of getting a D7(G) and I see lots of useful discussion over the months. I have a D700 and quite like it. I want something a bit smaller and lighter for packpacking.

This is the only "public" group I belong to. There is very little spam on the the others.

Hello Group,
Can anyone tell me where I can find a cable for the Kenwood TH-D7AG
for the Serial RS232 end to go to USB ?
for the programming and APRS and GPS
Also did the Kenwoodthd7agclub move some place else?????

Thank You All!!!!

Hello:
I am new to the group and just spend 30 minutes looking for a serial cable diagram. Anyways here is my answer:
1) You will need to buy a USB Serial prot for your computer. Should cost no more that $40.00. Then you should buy the PG-4w (I think) serial cable or make one.

I am just about to make one and my guess is that the following will work.

Kenwood 2.5 plug and pre-installed cable one end and a DB9 serial plug on the other that will fit your PC (Female)
Untested but I am going to connect:
PIN2 - White
PIN3 - Red
PIN5 - Ground or shield.

I just hope it does not need any links in the DB9. If it works, I'll post another follow-up.

This works like a charm for those interested.

I did have a problem with the software, it was for the D7A and ot the D7AG. I got the new software and I am running it through a USB Serial adapter from RadioShack.

340. My TH-D7A(G) is LOCK !!!

Yahoo group: kenwoodthd7agclub
Date: 2007-03-04 16:47:25 UTC
From: n0cda
Topic: 340 Message: 340

My HT was working fine yesterday and then suddenly it locked up. All keys are locked except the power, light, and squelch. It receives but won't transmit. The VFO is also locked up. I have tried everything to get it back up and running except throwing it down my driveway. I have tried the reset but the keys don't work. All the keys beep, but are all a single tone. Not different tones when working properly. The TX key also beeps once when pushed and again when released. Has anyone else had this problem??

This group has been abandoned by it's creator, and there's no way to
change its settings to block spammers. So, it's essentially moribund.

Try this group:

All the girls out there are totally lying when they tell you that size does not matter. Want proof?
I am telling you this because it is the honest truth, look I should know, they say that it is all in the way you use it, not how big it is, well I got news for you all, that is pure lies.
I know from personal experience, I will tell you about a secret that Joey has made me promise to never ever tell anyone, but since he has not called me in three weeks after standing me up, I am going to break the promise and tell you how he went from having a tiny wang and in 4 months he is now about nine inches and get this, it is still getting bigger. He has been secretly taking grow pills from this site http://www.bloak.net/hyit

I experienced this problem awhile back. It seems that somewhere
along the line I had locked the transceiver. Look for the key symbol
in the upper right hand corner of the display. Once I unlocked it the
program wrote to the HT just fine. Hope this helps.

525. Stock Trading Secrets?

Yahoo group: kenwoodthd7agclub
Date: 2007-10-25 07:16:48 UTC
From: magi yaci
Topic: 525 Message: 525

How often have you come across an advertisement or e-mail proclaiming to "teach" you the stock trading secrets that Wall Street Insiders don't want you to know? Usually included in the descriptions of these trading products are claims such as "Make 10K monthly in minutes per day", or "Learn the secrets of Professional Stock Brokers", etc. etc. So what are these "secrets" that they are SELLING?

And if the Wall Street Insiders and the Professional Stock Brokers didn't want to reveal these trading secrets with you, then how come the companies or individuals selling you these products are so quick to give up these "Never before revealed" techniques?

First of all, you're not likely to get much response from this group as it has been abandoned by its moderator and nearly all of its members. Mostly the few of us who still receive posts from this group just see spam. There are at least two other active Yahoo groups that have discussions concerning the TH-D7:

> http://groups.yahoo.com/group/APRS_Radio_Built-in_TNC/
and
> http://groups.yahoo.com/group/Kenwood_TH-D7/

Now, to answer your question, have you tried Googling "TH-D7 Belt" or "TH-D7 belt clip" (without the quotes)? I did and saw a good number of possibilities. I think I remember seeing at least one supplier that has what they claim are "heavy duty" belt clips. Seems like some suppliers of HT battery packs also sell belt clips.

Personally, I don't like rigid plastic belt clips because, if you have even a little belly fat or just bend over the wrong way, those plastic clips can break off dropping your radio on the ground. If you're lucky you'll notice it has fallen off, and if you're very lucky the radio will still work and not be badly damaged.

I prefer a flexible way of hanging the radio from my belt that uses a short piece of nylon strap or nylon cord, and some method of securely attaching the strap or cord to the radio. One of those small keyring carabiners will let you attach it to a belt loop or something that wraps around your belt (if you're old enough and are/were an engineer, think "Slide Rule case belt loop"!).

I don't normally carry my TH-D7 on my belt, so I haven't worked out a hanger for it yet, however it appears that attaching a flexible strap at the back of the battery case would cause it to hang awkwardly since it is so off-center from the HT's center of mass. So, I'd have rethink whether a flexible strap could be made to work well with the TH-D7.

When I want to carry my TH-D7 around and keep my hands free, I put it in a small camera case, by Samsonite, from Walmart that has a shoulder strap and a belt loop. They're less than $10 and usually you can also carry a few accessories like a spare battery and/or antenna adapters. This works best

if you can find a case where the closure method will allow the case to be mostly closed around the antenna. My case has a zipper across the top (from right to left) so I just close it to where it stops at the antenna. I once had one of the Kenwood neoprene TH-D7 cases and didn't like it because it was very difficult to remove the HT and the case interfered with plugging in the various PC, GPS and power cables. But, if I remember correctly, it at least had a metal belt clip.

A word of warning:
I have a couple of WWH-PB39 battery packs from W&W Manufacturing. The way the clip attaches, the clip can stay on your belt and the radio can fall. I had it happen as I left a club meeting. As luck would have it, my hand was swinging forward as a D7 magically appeared!
We had a date with the Crazy Glue as soon as I got home!
I must say their clip does operate much better than the Kenwood one, I just don't like the way they attach.

I agree about MCP-D7G, but I'd recommend that you mosey on over to the other Yahoo forums that support radios with built-in TNCs, namely:

> http://groups.yahoo.com/group/Kenwood_TH-D7/

> http://groups.yahoo.com/group/APRS_Radio_Built-in_TNC/

Maybe there are others?

This forum [Kenwood TH D7A G Club] has apparently been abandoned by its moderator and has become nothing more than a magnet for spammers. I suspect not many hams monitor it anymore, so you'll get better response to your queries.

As for memory programs for the TH-D7G, there are some others besides the one from Kenwood, some free and some not. I think if you got the cable new from Kenwood, it normally comes with a CD having the MCP-D7G program and an in-depth programming manual in PDF form.

Note that there are separate programs for the TH-D7 and the TH-D7g. If you log into Yahoo groups and join each of the groups supporting these radios, one of them has the MCP-D7G program and the in-depth manual available for download from the files section. I don't recall which groups have the best files sections, but it is worthwhile to visit them all.

I think some of the other free TH-D7 control programs are in the files section of one of the groups.

Hello
I was able to pick up a used TH-D7AG the other day
and been busy playing and learning about it.
I have a small problem, B band acts like the seq is set to low.
when scanning its is real slow and beeps with every channel change.
I have set the seq and switch freqs in the B band with the same response. so I must have something set work
any ideas where I should start looking
Thanks

Tom,
First of all, this forum has been abandoned and is basically just a spam magnet now with no moderation. You might check to see if the Files and other sections still have anything useful, but then I'd join one of the other Yahoo forums that relate to the TH-D7, such as [Kenwood_TH-D7] and/or APRS_Radio_Built-in_TNC].

If by "seq is set to low" you meant "squelch set too low," I think you're probably right. That would surely cause it to pause at each frequency as if there was a real signal there. Unfortunately, radios such as the TH-D7 with digitally set squelch levels often don't provide for very much precision in setting the squelch, and the available settings frequently are either a little too much and a little too little. I haven't checked but I think the squelch settings for the A and B bands *may* be independent. A check in the manual should clear that up.

I'm not sure what you meant by the rest of your post. In posting about technical things, it's best not to use abbreviations and contractions.

I find that if I attempt to use any of my hand held radio gear (those with an attached antenna) too close to a computer or certain other electronic devices, I frequently pick up spurious signals. If you need to operate the TH-D7 close to a computer, it helps a lot to connect the TH-D7 to an outside antenna or at least one some distance away from the devices causing the spurious signals. Since the TH-D7 is likely to be used while connected to a computer, it'd be best to use an antenna as far away from the computer as possible. You might also want to use "snap-on" filter toroids (such as those sold by Radio Shack, for example) on the power, computer and antenna leads. If you are just using the scanning feature in the beginning to find active frequencies, I'd just move away from the computer, if that's the problem.

Barry

587. Voltage message and Beeping problem.

Yahoo group: kenwoodthd7agclub
Date: 2009-12-18 21:59:13 UTC
From: kd1ke
Topic: 587 Message: 587

I have a kenwood th d7a that will start beeping and display voltage error message when I plug into the dc jack with 13.6v, 13.0v, and even if I plug in the wall-wart charger. I have two other Kenwood d7a(G's) and I don't have this problem with either of those. The ht in question works fine other than when I add 12 volts to the dc jack.

Has anyone else had this problem, and if so, what was the cure?

Thanks in advance.

73,
Tom.

634. TH-d7A, PB-39, BC-19

Yahoo group: kenwoodthd7agclub
Date: 2010-10-01 01:14:17 UTC
From: avertinc@sbcglobal.net
Topic: 634 Message: 634

My PB39 battery, which is about 4 years old, has been working fine until this week. When I place it in the BC-19 charger, the led no longer turns green, it stays red and the battery gets pretty warm.

The radio is always off when charging, and it is seldom used but always in the charger.

The battery will last over 8 hours. Is it a safe assumption that it is the battery and not the charger at this point in time?

Thanks

Richard

I uploaded a file I found for the RX/TX mod. Suprised nobody has uploaded it before. My question is, is there a mod that opens the RX for 800Mhz? All my other dual bands recieve 800Mhz. Does anyone know if there is one?
Thanks, Kevin

How To Beat The Soaring Prices!

An absolutely amazing program! Since joining I have been saving between 70% - 85% on all my groceries. Several women in my crochet class told me they are also using this program and saving a fortune. I am so glad I found this article. The company's website is at http://savingmorethanbefore.com You literally end up paying pennies on the dollar for everything!

I just want to tell everyone that their is no need to thank me for my recent recommendation of the programs at http://savingmorethanbefore.com Many of you are emailing me images of your receipts etc. To be honest my inbox is filling up and I can't stay on top of all the email. I am just happy to help my great members. It is part of my responsibility as a group moderator. Please no more messages of thanks - I know that many of you are takingadvantage of this program and just knowing that I helped make a difference in your life is all the thanks I need!

Recently our moderator shared her high praise for the savings programs at http://savingmorethanbefore.com I found her posting to be very interesting. As
some of you know my magazine has a feature section where we research and report on various programs every month. So I decided that we would research this program last month. We signed up as a regular consumer, we signed up for their sampler program. In 6 days from the date we placed the order, the package arrived. We immediately began using the various programs that it includes. At
the supermarket, we purchased $ 177.74 worth of food and general non food items and only had to pay $ 18.83. Then we tried the restaurant program, being hungry from all that shopping, myself and three other staff members went out to eat. Using this program we ate out at a 50% savings. Finally, we purchased several items from the Online Wholesale Mall and saved between 36% - 52% off there normal prices. Overall, we found this program to be highly effective and our column indicates the same.

1710. Anybody use a Garmin GPS 12 XL for APRS position ?

Yahoo group: kenwoodthd7agclub
Date: 2016-06-01 23:35:42 UTC
From: zieleck1@...
Topic: 1710 Message: 1710

Greetings, just dig my D7 A(G) out of the closet with a Garmin GPS 12 XL .

I am fairly confident the data cable is wired properly and I tested the NMRA output on a computer and it works. Just no position on the D7.

Anybody ever successfully use this model with the. D7?

Thanks!

...Ken

I use one all the time, works fine. Just reverse your TX/RX wires in the cable and try again.
